This sequence is used in the method of invention for tagging genes, transcripts and proteins in cells in a single recombinational event. The method comprises producing a tagged gene by inserting a DNA sequence method comprises producing a tagged gene by inserting a DNA sequence into an introm of a gene by selecting a DNA sequence having a 5' portion free of any nucleotide sequence selected from AAV43548 to AAV4351, a nucleotide sequence selected from AAV43552 to AAV43560 and nucleotide sequences identical to a known splice branch site in a known gene, sequences identical in length to a known gene, sequences identical to a known splice or splice acceptor sites in a known gene, sequences identical to a known splice or splice acceptor site in a known gene, sequence identical to a known splice once identical to a known conclectides in length, the ORF encoding a known peptide tag and sequences splice once in length, the ORF encoding a known peptide tag and sequences selected form CAGG and TAGG. The DNA sequence is inserted into the introm within the gene to create a tagged gene, and the tagged gene is incubated within the gene to create a tagged gene, and the tagged gene is incubated within the genome of the cell. The method is used for isolating proteins, and transcriptional regulation, for the study of viral infection and for all and a sequence of the cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

transcripts that are preferentially transcribed in the metastatic breast tumour tissue (i.e. are upregulated in metastatic breast tumour cells).

AA283942 to AA28667 represent tags corresponding to distinct transcripts that are preferentially transcribed in the primary or non-metastatic that are preferentially transcribed in the primary or non-metastatic corresponding to distinct transcripts.

These transcripts can be used for diagnosis, prognosis, calls). These transcripts can be used for diagnosis, prognosis, calls by standard immunoassays or hybridisation/amplification reactions. Compounds that modulate expression of the transcripts are potentially useful for treatment of (metastatic) breast cancer, while promoters from the transcripts are used to direct expression, in selected cell types, of e.g. therapeutic genes (also ribozymes or antisense sequences), particularly an antigen-encoding sequence for use in gene or useful in vaccines; for diagnosing breast cancer and for raising specific antibodies (Ab). Ab are used to detect the polypeptides or as therapeutic agents. Host cells that produce the polypeptides can be used to expand and isolate populations of educated, antigen-specific immune effecter cells, e.g. cycotoxic T lymphocytes, and these used for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  transcripts that are preferentially transcribed in the metastatic breast tumour tissue (i.e. are upregulated in metastatic breast tumour cells).

Aza83942 to Aza8667 represent tags corresponding to distinct transcripts that are preferentially transcribed in the primary or non-metastatic breast tumour tissue (i.e. are downregulated in metastatic breast tumour cells).

Cells). These transcripts can be used for diagnosis, prognosis, monitoring and treatment of breast cancer, particularly where metastatic. Diagnosis is by standard immunoasasy or hybridisation/amplification cactions. Compounds that modulate expression of the transcripts are promoters from the transcripts are promoters from the transcripts are used to direct expression, in selected cell types, of e.g. therapeutic genes (also ribozymes or antisense sequences), particularly an antigen-encoding sequence for use in gene or cell types, of e.g. therapeutic genes (also ribozymes or antisense cell types, of e.g. therapeutic genes (also ribozymes or antisense cell types, of e.g. therapeutic genes (also ribozymes or antisense cell types, of e.g. therapeutic genes (also ribozymes or antisense cell-based vaccines; for diagnosing breast cancer and for raising specific antibodies (Ab). Ab are used to detect the polypeptides on as therapeutic agents. Host cells that produce the polypeptides can be used to expand and isolate populations of educated, antigen-specific immune cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                   AA280767 to AA283941 represent tags corresponding to distinct transcripts that are preferentially transcribed in the metastatic breast tumour tissue (i.e. are upregulated in metastatic breast tumour cells). AA283942 to AA286677 represent tags corresponding to distinct transcripts that are preferentially transcribed in the primary or non-metastatic breast tumour tissue (i.e. are downregulated in metastatic breast tumour cells). These transcripts can be used for diagnosis, prognosis, monitoring and treatment of breast cancer, particularly where metastatic. Diagnosis is by standard immunoassays or hybridisation/amplification reactions. Compounds that modulate expression of the transcripts are potentially useful for treatment of (metastatic) breast cancer, while promoters from the transcripts are used to direct expression, in selected
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cell types, of e.g. therapeutic genes (also ribozymes or antisense sequences), particularly an antigen-encoding sequence for use in gene or cell-based vaccines. Polypeptides encoded by the transcripts are also useful in vaccines; for diagnosing breast cancer and for raising specific antibodies (Ab). Ab are used to detect the polypeptides or as the rapeutic agents. Host cells that produce the polypeptides or as to expand and isolate populations of educated, antigen-specific immune effecter cells, e.g. cytotoxic I lymphocytes, and these used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mouse; heat shock antigen; HSA; human; rat; signal transducer; CD24; fusion protein; inhibition; autoreactive T cell; aTC; primer; PCR; autoimmune disease; multiple sclerosis; rheumatoid arthritis; systemic lupus erythematosus; psoriasis; diabetes; allergy; amplify; transplant rejection; transgenic mouse; polymerase chain reaction; ss.

The present invention relates to an isolated and purified polynucleotide located on mouse chromosome 2, encoding histidine decarboxylase, comprising exons 1 to 12 to a total length of approximately 24kb. The present sequence is an exon/intron boundary from the histidine decarboxylase polynucleotide sequence of the present invention. Recombinant vectors containing the polynucleotide with at least one exon substituted by a drug resistance gene, preferably neomycin resistance are also claimed. The polynucleotide is used to produce histamine defective animal models for studying histamine related disorders in humans and to produce treatments for them.
in a sample, involving determining which of the sequences AAH63161-AAH64724 is expressed by the cell. The transcriptomes described in the invention are cell-type specific, cancer specific or ubiquitously expressed in humans. They can also be used to screen for drugs, reduce cancer specific gene expression, standardise expression and restore the function of a diseased cell or tissue. The present sequence is one of the transcriptomes described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Murine; histidine decarboxylase; enzyme; mouse chromosome 2; histamine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Polynucleotide encoding histidine decarboxylase located on mouse chromosome 2 for producing histamine defective animal models -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Murine histidine decarboxylase exon/intron boundary #9.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a method of identifying the type of
                                                                                                                                                                                                   The sequences given in AAH43525-34 are primers which were used in the production of a fusion gene which comprises a nucleotide sequence encoding the mouse heat shock antigen (HSA) fused to the cDNA sequence of human IgG1 Fc. The resulting fusion protein may be used in the method of the invention for inhibiting destruction of tissue initiated by autoreactive T relis (aTC). The method is especially used to treat subjects suspected of having autofmmune diseases, particularly multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus, psoriasis, diabetes and allergy, also transplant rejection. Transgenic mice that express human CD24 on their T cells are useful as models for testing drugs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human ubiquitously expressed transcriptome sequence SEQ ID NO: 311

This sequence represents a splice donor site that can be used in a VP16

gene trap vector used in the method of the invention. The method is for

detecting interaction between an endogenous protein of a cell and a test

control of a transcriptional regulatory element, and a

transcriptional control of a transcriptional regulatory element, and a

control DNA sequence that is expressed by the cell and which encodes a

first hybrid protein comprising a first transcriptional regulatory

control moiety (TRP) selected from a DNA binding domain that recognises a

first hybrid protein comprising a first transcriptional regulatory

control moiety (TRP) selected from a DNA binding domain that recognises a

control moiety (TRP) selected from a box binding domain that recognises a

control moiety (TRP) selected from a box binding domain that recognises a

control moiety (TRP) selected from a box binding domain that recognises a

comprises: (a) placing into the cell; and a test protein. The method

comprises: (a) placing into the cell; and a test protein to morrising one or

more mRNA splice sites, and a third DNA sequence encoding a second TRP

comprises: (a) placing to and activating the transcriptional regulatory

clement controlling transcription of the first DNA sequence; and

conforted the conformation of the cell capable of interaction with the

conforted the conformation of unknown genes according to protein protein

conforted the conformation of dentification of genes encoding transcriptional

This sequence represents a splice donor site that can be used in a VD16 gene trap vector used in the method of the invention. The method is for detecting interaction between an endogenous protein of a cell and a test protein. The cell contains a first bnA sequence encoding a reporter under transcriptional control of a transcriptional regulatory element, and a second DNA sequence that is expressed by the cell and which encodes a first hybrid protein comprising a first transcriptional regulatory controlling a first transcriptional regulatory element controlling transcriptional of the first DNA sequence and, a transcriptional comprises of transcriptional of the first DNA sequence and, a transcriptional comprises: (a) placing into the cell; and a test protein. The method comprises: (a) placing into the cell; and a test protein. The method comprises in the first TRP, will reconstitute a second TRP which, when combined with the first TRP, will reconstitute a transcriptional controlling transcription of the first DNA sequence; and activating the transcriptional regulatory element controlling transcription of the first DNA sequence; and indicator of expression of a second hybrid protein comprising the second TRP and an endogenous protein of the cell capable of interaction with the capable of protein. The method is used for the identification and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel plasmid comprising a cytomegalovirus (CMV) promoter transcriptionally linked with an interferon alpha region (IFN-alpha) coding sequence, and a growth hormone 3'-untranslated region (UTR). Sequences AA240412 and AA240413 represent synthetic 5' and 3' splice donor and acceptor sites respectively for generating a synthetic intron to be inserted into the plasmid of the invention. The plasmids can be used for treating a mammalian condition or disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New plasmids containing an interferon-alpha coding sequence, used for the treatment of a mammallan condition or disease, particularly cancer

This sequence represents a splice donor site that can be used in a VP16 gene trap vector used in the method of the invention. The method is for detecting interaction between an endogenous protein of a cell and a test protein. The cell contains a first DNA sequence encoding a reporter under transcriptional control of a transcriptional regulatory element, and a second DNA sequence char is expressed by the cell and which encodes a first thybrid protein comprising a first transcriptional regulatory element controlling protein moiety (TRP) selected from a DNA-binding domain that recognises a binding site on the transcriptional regulatory element controlling transcriptional of the first DNA sequence and, a transcriptional comprises: (a) placing into the cell; and a test protein. The method activator functional in the first DNA sequence encoding a second TRP which, when combined with the first TRP, will reconstitute a comprise sites, and a third DNA sequence encoding a second TRP which, when combined with the first TRP, will reconstitute a controlling transcription of the first DNA sequence; and clement controlling transcription of the first DNA sequence; and clement controlling transcription of the first DNA sequence; and conditions and conditions of a second hybrid protein comprising the second manner.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TRP and an endogenous protein of the cell capable of interaction with the test protein. The method is used for the identification and characterisation of unknown genes according to protein-protein interactions or for identification of genes encoding transcriptional

The present invention describes nucleic acid molecules which modulate the synthesis, expression and/or stability of a mRNA encoding 1 or more receptors of vascular endothelial growth factor (VEGF). A patient (preferably human) having a condition associated with the level of the fims-like tyrosine kinase 1 (flt-1), kinase insert domain containing receptor (KDR) and/or foetal liver kinase 1 (flk-1) (e.g. tumour amigiogenesis, ocular diseases, psoriasis and rheumatold arthritis) can be treated by administering the nucleic acid molecule or the expression vector to the patient. AAX67275 to AAX75752 represent specific examples of nucleic acid molecules from the present invention.
                                                                                                                                                                                        Vascular endothelial growth factor receptor; VEGF receptor; flt-1; flk-1; KDR; hammerhead ribozyme; hairpin ribozyme; cleavage; tumour angiogenesis; psoriasis; rheumatoid arthritis; ocular disease; fms-like tyrosine kinase 1; kinase insert domain containing receptor; foetal liver kinase 1; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acid molecule modulating VEGF receptor(s) gene expression mRNA stability - useful for treating e.g. tumour angiogenesis, psoriasis, rheumatoid arthritis, etc., in a human patient
                                                                                                                          Human KDR VEGF receptor hammerhead ribozyme substrate #430.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Escobedo J, McSwiggen J, Pavco P, Stinchcomb
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 4; Page 110; 218pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          96WO-US17480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           96US-0584040

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes nucleic acid molecules which modulate the synthesis, expression and/or stability of a mRNA encoding 1 or more receptors of vascular endothelial growth factor (VEGF). A patient (preferably human) having a condition associated with the level of the fms-like tyrosine kinase 1 (fit-1), kinase insert domain containing receptor (KDR) and/or foetal liver kinase 1 (fik-1) (e.g. tumour angiogenesis, ocular diseases, psoriasis and rheumatoid arthritis) can be treated by administering the nucleic acid molecule or the expression vector to the patient. AAX67275 to AAX75752 represent specific examples of nucleic acid molecules from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    flk-1; KDR; hammerhead ribozyme; hairpin ribozyme; cleàvage;

                                                                                                                                                                                                                                                                                                   A method has been developed for detecting the presence or absence of a single nucleotide polymorphism (SNP) allele in a genomic sample. The method comprises preparing a reduced complexity genome (RCG) from the genomic sample and analysing the RCG for the presence or absence of a SNP allele. The method can be used to characterise a tumour, to generate a genomic pattern for an individual genome or to generate a genomic classification code for a genome. The method can be used to assess whether a subject is at risk for developing a disease or to identify a set of SNP alleles associated with a disease. The method can also be used to perform linkage analysis. AAA35944 to AAA35947 represent sequences used in the exemplification of the present invention. AAA35948 to AAA35632 represent nucleotide sequences containing SNPs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Single nucleotide polymorphism; SNP; human; genetic disease; disease susceptibility; cardiovascular system; endocrine system; neurological system; forensic testing; paternity testing; PCR primer; ss.
                                                                                                                                                                                                                        Detection of single nucleotide polymorphisms in genomes by preparation and analysis of reduced complexity genomes, useful for genotyping, fingerprinting and determining allele frequency of SNPs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                     The present invention is concerned with a number of human single nucleotide polymorphisms (SNPs) which the inventors identified in human genes. These SNPs can be used in disease diagnosis and prediction of an individual's susceptibility to disease, in forensic and paternity testing and in genetic mapping. In particular, the SNPs of the invention can be used to diagnose susceptibility to diseases of the cardiovascular, endocrine and neurological systems, such as coronary artery disease, schizophrenia, cancer, autoimmune diseases, Alzheimer's and Parkinson's
                                                                                                                                           Nucleic acid selected from one of 106 genes comprising single nucleotide polymorphisms, allele-specific oligonucleotides to the gen are useful for phenotypic correlations, forensics, paternity testing,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 143,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 31, Application US/09226012
Patent No. 6207383
GENERAL INFORMATION:
APPLICANT: Reating, Mark T.
APPLICANT: Splawski, Igor
TITLE OF INVENTION: MUTATIONS IN AND GENOMIC STRUCTURE OF HERG - A LONG QT
TITLE OF INVENTION: MUTATION OF STRUCTURE OF HERG - A LONG QT
TITLE OF INVENTION: MUMBER: US/09/226,012
CURRENT APPLICATION NUMBER: US/09/226,012
CURRENT FILING DATE: 1999-01-06
EARLIER APPLICATION NUMBER: 09/122,847
EARLIER FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 116
SOFTWARE: PatentIn Ver. 2.0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δ
                                                                                       (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (qil4732114) qiplaFL29072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicilin resistance."

Imporatory Mouse DNA Resource
(http://www.jax.org/resources/documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polymucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis. Vector DNA was prepared from a derivative
of PMD42 (gil4732114) [plARL29072.1], a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
chemically-competent E. coli XL10-Gold (Stratagene) cells
and selected for ampicillin resistance."

double-stranded cDNA was size selected, ligated to Eco N adapters (Pharmacia), digested with Not I and cloned into the Not I and Eco Ri sites of a modified pr773 vector (Pharmacia). Library went through one round of normalization to a Cot = 53. Library constructed by Bento Soares and M. Fatima Bonaldo. The adult brain RNA was provided by Dr. Donald H. Glanden. Tissue was acquired 17-18 hours after death which occurred in consequence of a ruptured aortic aneurysm. RNA was prepared from a pool of tissues representing the following areas of the brain: frontal, parietal, temporal and occipital cortex from the left and right hemispheres, subcortical white matter,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     EST 23-JUN-1998

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δλ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   qq
                                                                                                                                                                        (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymerase at the polymerase and T4 polymerase at the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil4732114)[pb]AR129072.1], a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for amplcillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

was blunt end repaired with 74 bNA polymerase and 74 polymuclectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored bNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector bNA was prepared from a derivative of pWD42 (gil4732114)plAb129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse bNA was annealed to adaptored vector bNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  рp
                          /note="Organ: pooled; Vector: pT773D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (fetal lung NDHL19W, testis NHT, and B-cell NCI_CGAP_GCBI) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified consols from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 297480-302087, 682632-687239, 726408-728711, and 729096-731399. Subtraction by Bento Soares and M. Fatima Bonaldo. "

```
(http://www.jax.org/resources/documents/dhares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymerase bunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwD42 (qilq/32114)plAPL29072.1), a copyrnumber inducible derivative of plasmid R1. The vector was 11gated with adaptors complementary to the innert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli xL10-Gold (Stratagene) cells and selected for amplcillin resistance."

day adult Y(*) w(67c1/Y males raised at 25oC. RNA
isolated using Trizol (Life Technologies) and a single
round of Poly(A)+ selection using Oligotex (Olagen). CDNA
library constructed using Stratagene ZAP-cDNA syntesis
kit. Oligo dT-primed, size fractionated -1-6 kb, and
directionally cloned at EcoRI and XhoI in Uni-ZAP XR.
Following a single round of amplification pblueScript SK
phagemids were mass excised. A distribution channel for
clones is being sought, but not currently available.
Requests for clones cannot be honored."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              http://www.niddk.nih.gov/intram/people/boliver.htm
Tissue isolation and library construction performed at the National
Institute of Diabetes and Digestive and Kidney Diseases, NIH (see
http://www.niddk.nih.gov/intram/people/boliver.htm). DNA sequencing
and analyses performed by National Institutes of Health Intramural
Sequencing Center (NISC; see http://www.nisc.nih.gov).
